SPORT DIVING EQUIPMENT

PART
1

The Dolphin Lungs

The Dolphin lungs are the "open circuit," demand valve type using compressed air. The demand valve is placed on the DESCO U. S. Navy type full face mask, and operates at 70 p.s.i. supplied by a pre-set regulator located on the lung backboard. The chrome demand valve allows effortless breathing at any depth and is fully automatic. A "free flow button" is provided on the valve to furnish a direct flow of air at the touch of a finger.

The "Conserve-Air" attachment allows the diver to breath from the atmosphere rather than from the cylinder while not actually underwater. This provides definite advantages to those who must operate from the shore and swim to the diving area — All the air in the cylinder is conserved for diving time exclusively. Attachment has water cap closure so that rough water cannot enter mask. A simple pull and twist opens and closes snorkle. Should snorkle be left open when going underwater, a gentle flow of bubbles escaping from attachment will warn diver of his negligence.

The cylinders are fastened to a comfortable plastic backboard and adjustable shoulder straps insure a good fit for any size. A quick release buckle on the waist strap gives immediate freedom in case of an emergency. Cylinders are placed with valves downward to eliminate bumping the back of the head of the diver. Cylinders can be filled without removing them from the backboard.

Furnished accessories: Wrench and extra "O" rings.

NOTE: All of the large standard gland and nut fittings on DESCO lungs now incorporate a new "O" ring seal furnishing a virtually trouble free connection for both oxygen and compressed air . . . "finger tightness" now insures a good seal up to 2200 p.s.i.!

DOLPHIN PROFESSIONAL

Catalog No. D270

Two 70 cu. ft. cylinders giving 2 hours diving time at 33 ft. A "professional" type that gives the diving time required to successfully analyze and complete research and salvage operations.

Shipping Weight 78 lbs.

List Price \$245.00

DOLPHIN SPORT

these
Exclusive
Features

Beautifully Designed

The complete Airmaster Lung has been designed with the clean attractive lines of modern manufacture. The back board and cover are made of durable Royalite plastic, regulator base and fittings are chrome plated brass and the cylinder is furnished in navy blue to combine the complementary colors of silver, gray and blue in attractive harmony. The back board arrangement provides the most comfortable harnessing arrangement possible. Satin finish stainless steel straps on the cylinder give attractive durability. The Airmaster regulator is available with EITHER standard oxygen fitting or yoke attachment.

Engineered for Safety

All functional parts machined from stainless steel, complete air inlet valve consists of three parts—ONE MOVING PART. Neoprene coated nylon diaphragm impregnable to all elements. The Simplest valve in any demand regulator offering unequalled efficiency and durability. (Non-return valves in the mouth piece insure safety to both beginner and expert.)

Priced Right

Only the Desco Airmaster offers you real dollar value and extra safety at this

DESCO FEATURES THE New Exclusive "AIRMASTER" Regulator

with
"ONLY ONE
MOVING
PART"

Completely safe
nothing to go
wrong

The exclusively patented valve inside the regulator is designed to work on a balanced pressure basis. The valve works equally well, in its single stage construction, at 3000 p.s.i. or 3 p.s.i. With only 3 machined parts made of stainless steel virtually all possibility for malfunction has been eliminated — maintenance ceases to be a problem. The seats are "O" ring piston type seals and have been proven in industry for trouble-free operation. Air inlet is orificed to provide "Noticeably different" breathing at 200 lbs., as a warning to the diver in diving time remaining.

DESCO

DESCO WATER SKIS ... *The Choice of Champions*

DESCO offers the finest and most complete line of water skis in the world. DESCO originally pioneered the sport of water skiing and to this day continues to manufacture the world's finest skis.

Made of the choicest straight grain ash selected for its toughness, resilience, freedom from warping, and absence of knots. No DESCO ski is painted—we are proud of and want you to see the beautifully grained woods—all skis hand sanded and spar varnished. All DESCO skis are made by our "permanent bend" process. The fore part of the ski is split, glued, bent and dried under pressure so that it will never tend to straighten out as will the common steam bends used in most skis.

PACIFIC FLASH

Catalog No. 29250
